Private Bitcoin & ALT coin update – Binocular Report #318

27 August 2021 - Confidential analysis using algorithmic sequences, mathematical equations & time cycles

Copyright Act (17 U.S.C): This document is copyright protected. Never distribute, reproduce, share (including by electronic means), any and all of this data. It is prohibited and against the law. Report any unauthorised distribution to your local authorities or to us.

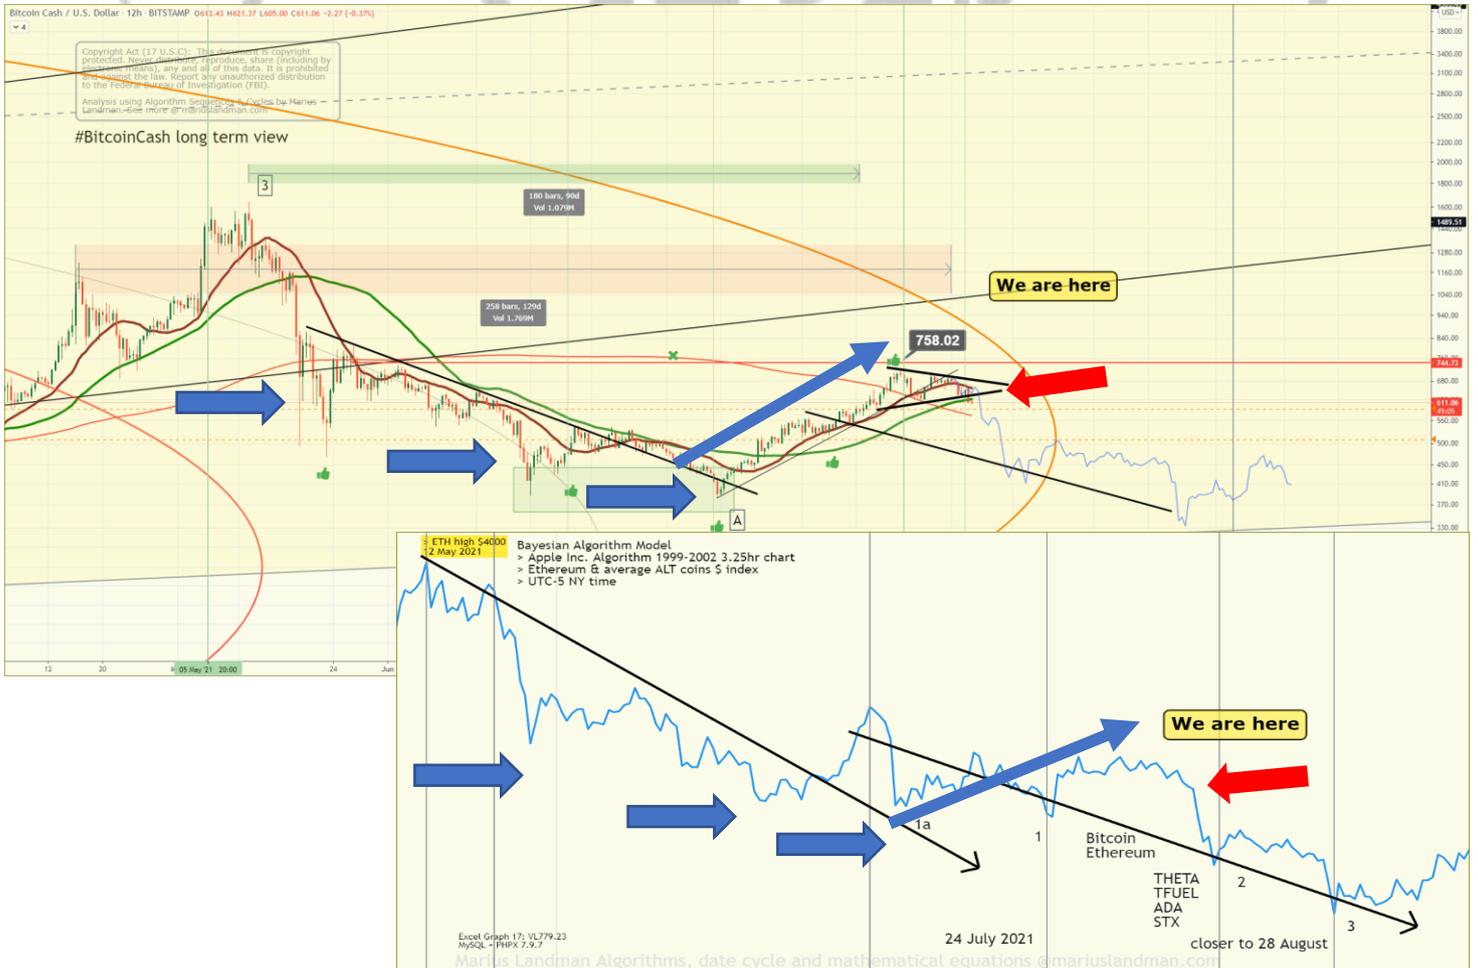

Always read and follow the latest date Report, Blog Post, weekly LIVE Webinar and/or the Webinar recording. Markets will change rapidly without notice and there are multiple factors influencing cryptocurrencies. All factors are taken into account on a daily basis. Release of new Reports & important Updates & Notifications are posted in the Private Telegram Channel. See last page of this report or the private members area for access details to the Telegram Broadcast Channel.

Spectacular gains at present but stay aware that archive algorithm data still point to a pullback/drop as indicated in the BitcoinCash chart and other ALT coins indicated in this report below.

In this report we are going to look at a number of coins and the potential algorithm chart patterns that could follow. Recall we stated BCH should hit around \$762 (more or less and then drop).

1. The **BitcoinCash #BCH** chart below indicate how the average archive algorithm data sees the market play out. The blue arrows indicate the pullbacks and following the predictive algorithm 100% so far. The red arrow indicates the current position and then following a moderate pullback.
2. The last and final pullback should be starting now. At this low point and bottom, we will see a major move upwards and the ideal place to ladder in positions. **Some coins may start to spike** and that's ok, it's how the cycle works. Trade all coins that spike upwards BUT WITH A STOP LOSS TO THE DOWNSIDE. **Plan for downside. If we break upwards, I will post if and when I enter markets.** For the time being, I am on the side with 90% cash and 10% IN MARKETS, and also ready to buy and ladder in dips. I have as an interim measure, sold all positions in ETH, ADA, BTC.
3. Remember, **markets could take DAYS to play out, patience is required.**
4. Ensure to attend the weekly live zoom call every Friday 7am Brisbane Australia time – link in private members area

BitcoinCash

For this report I will show the Archive Algorithm Cycle on a few ALT coins so you can have a larger view of markets – never focus on 1 or 2 coins for market direction, take a larger viewpoint of 100 selected coins, but in this report, we will do the analysis for you. Use it as a guideline.

Ethereum vs Archive Algorithm – be aware of possible pullback

Although ETH broke upwards of the \$2460 range and now trading at and above \$3000, we should be cautious for a pullback lower towards the \$2000 range and if so, will make a great entry and final buy back before ETH rallies upwards to +\$3500 range during the next cycle. I have personally sold all ETH (foundation coins included).

I will enter markets for ETH upon a total market recovery upwards. It is very likely markets could go sideways and then have a pullback lower. **There is no 100% confirmed evidence in the entire crypto market that we are in a bull run yet, it will come but less than 5% of coins are moderate/strongly above the 200MA.** So don't yet be too bullish, trade market upwards BUT WITH A STOP LOSS UNTILL WE HAVE A CONFIRMED BULL RUN – THIS COULD TAKE WEEKS AND WILL BE SET WHEN BITCOIN BREAKS \$65K.

There is always a possibility markets could break upwards next week, so stay connected and if we have a break of the algorithm upwards instead of downwards, we will post and notify. For now, we trade with the expectation to downside.

BIG NOTE – IF ETH BREAKS THE ALL TIME HIGH, I WILL BE BULLISH A LOT MORE. UNTILL THEN I TRADE THE SMALLER ALT COINS WITH A STOP LOSS TO DOWNSIDE OF AROUND 10% AND PATIENTLY WAIT.

Ethereum Classic #ETC – reminder that Archive Algorithm is the AVERAGE for all ALT coins and all coins follow more or less their own patterns and own price action as buyer and sellers place orders. With all coins we follow the data to the downside and as per the blue algorithm lines.

Bitcoin

XRP – potential for the green breakout as mentioned during the live weekly call today – but plan for downside (blue algorithm). If markets were to break upwards, we will advise in Telegram Channels what the next play will be. Ensure to watch today's live recording, it contains valuable information.

NEO – EXPECT A FAILED CUP AND HANDLE INCOMING OVER NEXT 90 DAYS

ADA – A STRONG COINS AND COULD BE TRADED UPWARDS TO \$6.6+. Expect a drop towards \$1.5 range and lower. ADA could be one of the first coins to bottom and then turn upwards.

BSV – possible \$115 range incoming and then a great buy. Nothing in this report is financial advice.

BCH – also mentioned on page 1.

THETA – tentative play as per blue algorithm lines. Chart may be revised pending the next 7 day activity. Ensure to attend each Fridays live weekly zoom call.

TFUEL – ensure to trade as per the #Hodlnator

Litecoin

DGB – stronger coin, may have already hit a low so no lower low expected but follow the blue algorithm lines

ZIL

XMR

BNB and KAI – KAI is following the BNB algo protocol, hold long term +3 years. BNB will follow the pattern for Bitcoin, if BTC drops BNB will drop too.

ZRX

XLM

DASH

LINK

QTUM

AAVE SRM DENT COTI DOT FET – we should follow these coins to ascertain market direction for small cap coins.

GOLD - heading upwards to \$1920

Similar, if Silver moves up then Bitcoin is expected to pull back too.

DOW JONES INDUSTRIAL AVERAGE

Why we need to pay attention to the predictive algorithm Past 40 Days

- The past 28 days we predicted some coins will sporadically spike upwards according to the algorithm and the pull back into 1a
- We also mentioned some coins will continue to spike upwards until the entire cryptocurrency market makes a U-turn and turn upwards
- Let's look at the predictions and forecasts of some coins and once you see what I see you'll want to pay attention to this predictive algorithm pointing to a low between 24 July and 10 August 2021
- We will take random examples from almost 894 coins that have already made the break upwards (this in real terms is a great sign that markets are about to make a U-turn upwards).

Review some of the coins below, which already have made their respective vertical spike upwards. Overall, expect some downwards momentum as per the second black line as indicated on page 1. Follow the blue algorithm line and then you'll know where the low entry overall should be. The greatest buy entry is about to come in all cryptocurrencies and they will have a sudden move or a sudden U-turn upwards around 24 July to 10 August.

The entire cryptocurrency market is about to turn upwards and some great buying opportunities is about to come.

HOW TO USE THIS ALGORITHM REPORT – January 2020

Despite the Bitcoin drop during 2018, the downtrend cycle has ended and Bitcoin went upwards during 2019 till June/July and then dropped further. A low was identified at the end of the AMTR at 17 December 2019 and we are expected to see some upwards movement going into 2020.

In 2018, Bitcoin gradually dropped from \$19,666 on 16 December 2017 when we here at Bitcoin Trend & Forecast made our call to subscribers to exit the markets at \$19,500: Report of 5 December 2017 to left.

On 28 June 2018 we called the World Bitcoin LOW and recommended our subscribers get into the market. On 24 July 2018 we called the Bitcoin high and recommended our subscribers exit markets.

We are mentioning these two examples to show you how to read our reports. These reports are not day trading reports. They are used as “swing trades” over a set period of time - 3 weeks to 2 months. Our goal is to find you the LOW point and then find the HIGH point in the market. We get in on the LOW and we sell at the HIGH and that is how we eventually make SUPER profits and gains. Keep in mind that we do not provide financial advice.

Going forward, we provide 2/3 reports and/or videos per week, provide in excess of 10 – 20 Private Telegram Bitcoin updates/messages weekly on our Private Telegram Channels worldwide and a Private Blog where we post important information daily. We also provide an

exclusive Private Weekly Webinar to our subscribers and we recommend you attend these webinars to gain and in depth understanding of the overall crypto and world stock markets. This will help you immensely. To find the updated links for Telegram and Webinars please visit our website or see the members area back office.

- How we gather data and provide the Bitcoin & ALT reports:
- Technical, Methodological Analysis, Advanced Algorithm Artificial Intelligence (weight 34%)
 - Linguistic Algorithm for USA Political & world Economic Trends (8%)
 - Wall Street Price & Time suppression (6%), Wall Street Playbook from insiders' sources (2%)
 - Proprietary and Conventional Behaviour Standards (8%), Market Conditions (weight 5%)
 - Market Cap (weight 7%), Marketing Capability (weight 5%)
 - Market Sentimentality & Attitude/emotions (weight 8%), Social Media Status and Reporting (weight 7%)
 - NEW - Induced Operational Manipulation (3%), Undisclosed (7%)

Always read the latest report. Things change rapidly as Bitcoin moves about 6x faster than the Apple trading stock. It is therefore important you follow the proprietary algorithm pattern and not necessarily price or time stamp (this could be correct in some cases but time can always contract or expand). Both price and date can be manipulated short term but the “pattern” cannot be altered and MUST PLAY OUT.

TERMINOLOGY

Limit Exposure or exit points

The term limit exposure means a trader could exit with 10%, or 20%, or 30% depending on the setup of the trader. The trader then sells higher and buys in lower.

By law we cannot give financial advice, cannot tell you when to buy or sell, nor can we entice you to buy or sell. Use this report as a guideline for training and education purposes.

Trading cryptocurrencies - training & educational only, not financial advice:

- An investor could hold positions and/or add to positions on pullbacks but trade with a STOP LOSS
- Move the STOP LOSS upwards as gains are made into target points (taught from our own training courses), see Hodlnots and TrendSignals
- The average a STOP LOSS for long term trades could be between 6-7% and 12-14%
- Once a STOP LOSS is hit, funds are moved into Stable coin such as USDT, PAX, TUSD etc. or added to other coins that are moving
- If markets keep going higher, re-enter positions upon a break upwards following the 55% rule upwards breakout.
- The 55% trade rule can be found here: <https://youtu.be/yus1iYVwKTl>
- All coins are expected to follow different price movements at different date cycles and not all coins will move at the same time
- A strategy is having a balanced personal portfolio with a set number of maximum 5-10 large cap coins and maximum 5-10 smaller caps coins from Small Cap Big Gains. You do not need to trade 30+ coins to make profit!
